

Disclosure of the penalty for exceeding capacity of DSO regarding the internal order of capacity (Interne Bestellung) according to section 18 of the agreement on cooperation between operators of gas supply networks in Germany dated 19 July 2006 in the current amended version (KoV)

According to section 18 paragraph 7 we disclose hereby the penalty for exceeding capacity of DSO connected to our grid regarding the internal order of capacity (Interne Bestellung). The penalty corresponds to the penalty that bayernets would claim from other transportation customers (traders) and matches with section 17 paragraph 1 of the Supplementary Terms and Conditions (German: EGB) to the General Terms and Conditions for the Entry-Exit System:

For an hourly capacity exceedance at an exit point the DSO shall pay, to the extent of the highest hourly exceedance, 10 times the fee for firm capacity at the network point on the day of the exceedance according to the bayernets price list. Hourly capacity exceedance is the difference between the capacity actually used and the booked capacity which is available after capacity reductions on the respective day.
